

1 SHARED CONTEXT

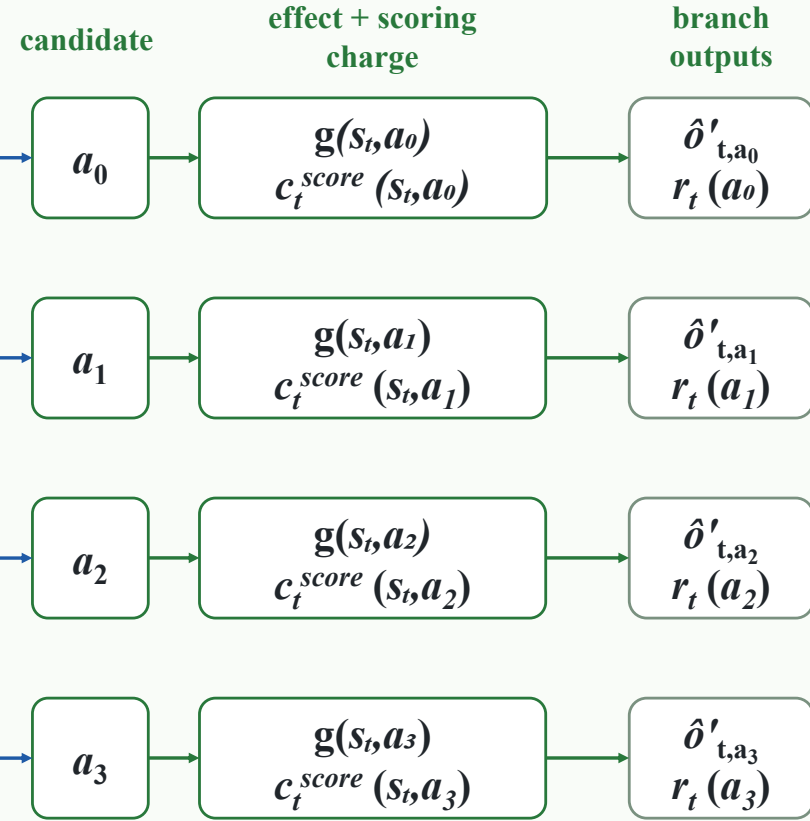

Causal observation & shared forecast

One timestamped forecast shared by all candidates.

2 EXPLICIT CANDIDATE CONSEQUENCES

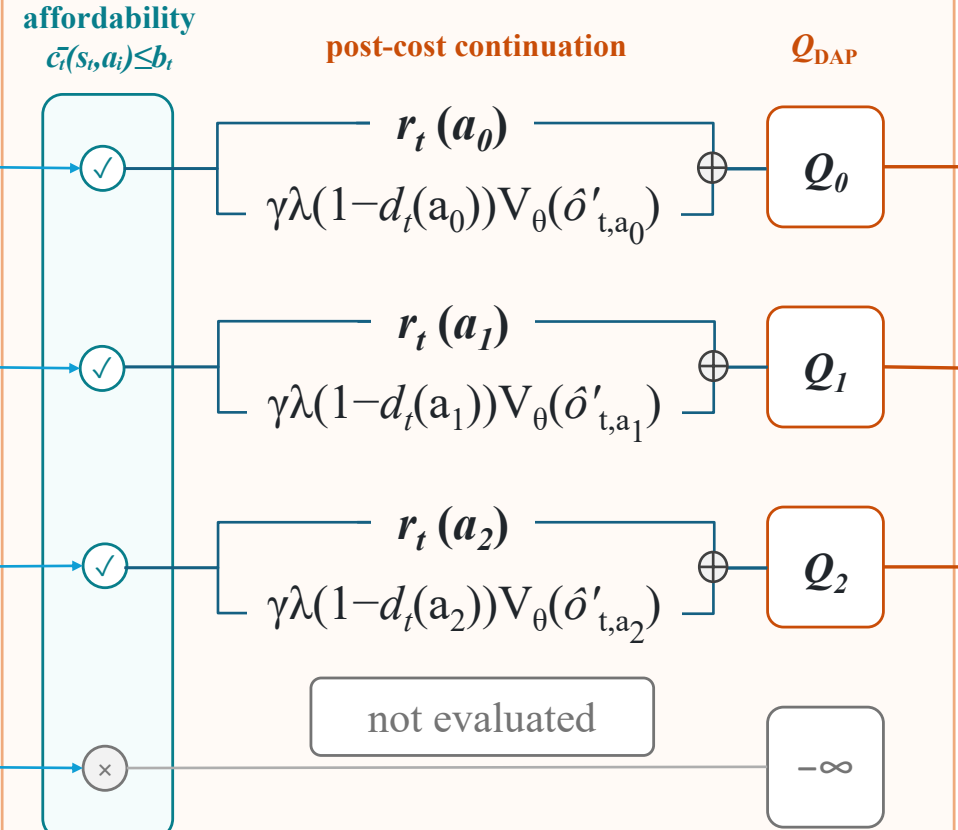

Structured action-conditioned branches

Contains $b_t - c_t^{score}(s_t, a_i)$ and $h_t - 1$.

3 AFFORDABILITY + OPPORTUNITY VALUE

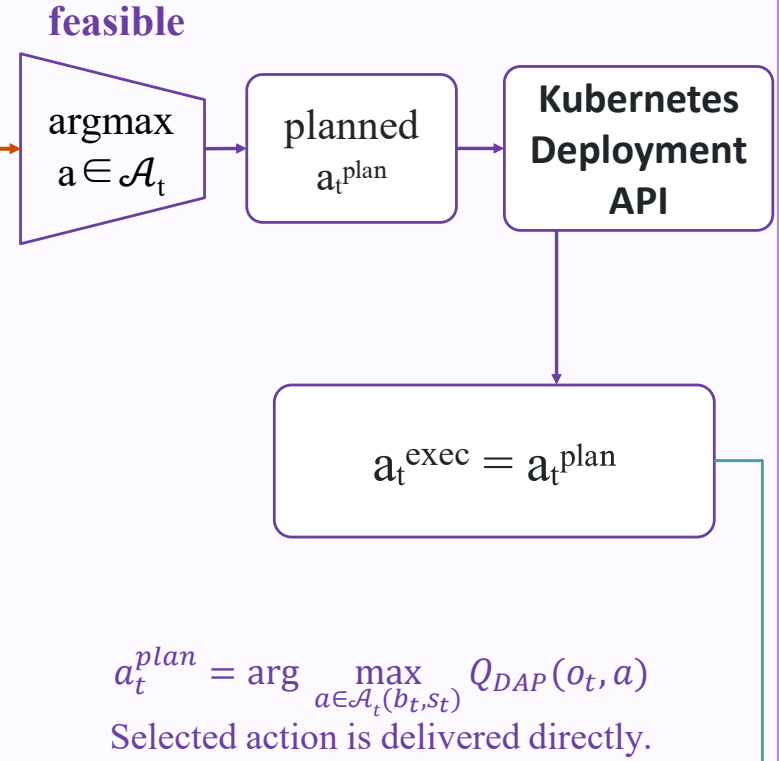

Feasible set first; value only for affordable actions

Gate forms the feasible set $\mathcal{A}_t(b_t, s_t)$; infeasible candidates receive $-\infty$ and bypass V_θ . Bottom row is illustrative.

4 FEASIBLE ARGMAX $\rightarrow$ ACTUATOR

Direct execution (no second policy)

OBSERVED EXECUTION FEEDBACK

TELEMETRY FEEDBACK

next telemetry s_{t+1}

Ready state + queue + service

LEDGER FEEDBACK

$h_{t+1} = h_t - 1$
 $b_{t+1} = b_t - \Delta C_t^{led}$

measured increment ΔC_t^{led}

Ready samples over time
